As perhaps the most promising of all the renewable energy sources available today, solar energy is becoming increasingly important in the drive to achieve energy independence and climate balance. This new book is the masterwork from world-renowned expert Dr. Soteris Kalogirou, who has championed solar energy for decades. The book includes all areas of solar energy engineering, from the fundamentals to the highest level of current research. The author includes pivotal subjects such as solar collectors, solar water heating, solar space heating and cooling, industrial process heat, solar desalination, photovoltaics, solar thermal power systems, and modeling of solar systems, including the use of artificial intelligence systems in solar energy systems, modeling and performance prediction. *Written by one of the world's most renowned experts in solar energy *Covers the hottest new developments in solar technology, such as solar cooling and desalination *Packed with quick look up tables and schematic diagrams for the most commonly used systems today' Grid-connected photovoltaic installations grew by 40% in 2009 compared with installations in 2008. California and New Jersey have the largest markets. Growth occurred in the residential and utility markets, but non-residential customer-sited installations did not change compared with the installations in 2008. Two small solar thermal electric plants were connected to the grid in 2009 with a combined capacity of 7 MW. The future prospects for solar thermal electric plants look bright, although developers are not expected to complete any new large plants until at least 2011. Solar

water heating and solar space heating annual installations grew by 40% in 2008 compared with 2007. Hawaii, California, Puerto Rico, and Florida dominate this market. Solar pool heating annual installation capacity fell by 1% in 2008 following a dramatic decline of 15% in solar pool heating capacity in 2007 compared with 2006. Florida and California are the largest markets for solar pool heating. The economic decline in the real estate markets in Florida and California likely led to the decrease in pool installations and thus the dramatic decline in capacity installed of solar pool systems in 2007.

Solar Energy Applications in Houses: Performance and Economics in Europe provides information on the state of development of solar space and water heating technology and on the influence of climatic and economic factors on the attractiveness of solar systems. The book discusses the aspects of climate relevant to solar system and house designs; the impacts of the different European climates on the thermal design and heating requirements of individual houses; and the passive solar energy use in buildings. The text also describes the components of active solar energy systems; the performance of active solar energy systems; and the economics of solar space and water heating. The supporting activities for solar energy systems and other energy-saving technologies implemented by governments, companies, energy supply utilities, solar societies and the Commission of the European Communities are also considered. The book will be invaluable to potential buyers or owners of systems who need practical information on the technical and economic possibilities of domestic solar energy use in the various countries of the European Communities. The information is also important for those people in government, administration, industry and research institutions who are involved in assessing solar energy applications, in planning for the future energy supply, in developing support measures for the introduction of energy-saving methods and in marketing solar hardware. This manual provides project managers, engineers, and operations and maintenance personnel with

information on designing, installing, and maintaining active solar energy systems for a variety of applications at Air Force facilities. These systems include domestic hot water, industrial process heat, space heating, space cooling, and swimming pool heating systems.
