Lipids in Freshwater Ecosystems Jun 12 2022 The fundamental purpose of this book is to synthesise the divergent literature on aquatic lipids into a co-ordinated, digestible form. A large part of the book addresses lipid composition and production in freshwater organisms, with chapters on phytoplankton, zooplankton and benthic

invertebrates. A common theme throughout the book is the function of lipids in aquatic food webs, with a chapter devoted exclusively to lipids as indicators of health in fish populations. A complementary chapter highlights the role of lipids and essential fatty acids in mariculture. Methodologies to determine the lipid content of aquatic samples and suggestions as to the utility of fatty acids as trophic markers are included, as is one chapter on the role of lipids in the bioaccumulation and bioconcentration of toxicants and another on the relationships between lipids and surface films and foams. The final chapter highlights the similarities and differences between lipids of marine and freshwater origin. Students and researchers in ecology, phycology, aquatic toxicology, physiological ecology and limnology will find this an invaluable guide and reference.

Death of the Leaping Horseman Dec 18 2022
Revised edition of a rare account of a German armored division in combat at the epic Battle of Stalingrad. • Day-by-day story of the 24th Panzer Division's savage fighting in the streets of Stalingrad in 1942 • Eyewitness accounts from participants reveal the brutality of this battle • Photos from official archives, private collections, and veterans--most of them never seen before • Used copies of the out-of-print earlier edition sell for more than \$900 • A treasure trove for historians, buffs, modelers, and wargamers

Island of Fire Nov 17 2022 Stalingrad was one of the largest, bloodiest, and most famous battles in history as well as one of the major turning points of World War II. For four winter months during the battle, German and Soviet forces fought over a single factory inside the city of Stalingrad. Lavishly illustrated with photos and maps, Island of Fire presents a day-by-day-at times hour-by-hour-chronicle of that pitiless struggle as seen by both sides. The book is unparalleled and exhaustive in its research, meticulous in its reconstruction of the action, and vivid in its retelling of the street-by-street, hand-to-hand fighting near the gun factory.

Panzerkrieg Feb 14 2020 Stalingrad is justly infamous for its ruthless urban fighting and the destruction of Paulus's entire 6. Armee, but the fact that Germany's vaunted Panzerwaffe (armoured branch) suffered a catastrophic setback there is

often overlooked. Three panzer regiments and three panzer battalions were wiped out, their valuable human and mechanical assets left lifeless in the ruins or on barren steppe that girdled the city. Conventional military wisdom eschews the offensive deployment of armour in an urban environment, yet panzers were crucial in many of the major tactical victories within Stalingrad's city limits and played a major role in holding the Nordriegel, a defensive position erected between the Don and Volga Rivers that held back several Soviet armies while the city itself was being subjugated by other German formations. In this first volume, the combat histories of Panzer-Abteilungen 103, 129 and 160 will be examined in great detail. Unprecedented access to Deutsche Dienststelle (WASt), a government agency that maintains records of former Wehrmacht personnel, has permitted the life and death of each battalion to be analysed in incredible detail. The narrative is enhanced by hundreds of rare photos drawn from official archives, private collections and the albums of veterans themselves. 559 photos, 12 aerial photos, 50 maps, 12 tables and 3 appendices.

East Africa's grasses and fodders: Their ecology and husbandry Feb 08 2022 This book is based on more than 1000 references to English and French

articles produced in the region over many decades. A comprehensive review of the achievements in farming and research in both wet and dryland is given, related to the grasslands of: Eastern Africa, extending from Malawi to Eritrea, including Ethiopia, Kenya, Uganda, Tanzania, Somalia, Zambia, Rwanda, Burundi, Sudan and eastern Zaire. Sown grasses, within the time-proven system of mixed-farming based on crop-grass rotations. Fodders, e.g. Elephant grass, dryland-Sorghum, lucerne, Leucaena, tropical legumes and hay. £/LIST£ The main objectives of the book are to illustrate the value of East African grasses and fodders for: Livestock: East Africa is the gene-centre of the world's most famous cultivated tropical grasses capable of achieving high animal performance, also without fertilizer. Soil fertility maintenance: local farmers pioneered the practice of grass fallows with Elephant grass to restore soil fertility. This was later extended to sown grasses to accelerate the restoration process. Crop yields are doubled following pasture. Environmental protection: priority in natural grassland is to prevent deterioration. In crop-pasture rotations grasses are effective in trapping rainfall and in reducing erosion by improved soil structure. Topics discussed include animal manure versus fertilizer; zero versus direct grazing; fodder crops (annual and perennial) versus grass conservation; seed production and plant breeding. The main species in cultivation are described in

detail.

Slime Girl Jan 19 2023 Slime Girl, book 1 of The Slime Girl Adventures Jessie loves slime! Trying out new recipes and slime experiments is her favorite pastime. When fate causes a military experiment to mix with Jessie's slime experiments, something truly magical happens. Jessie finds her six slimes have come to life. One for each color of the rainbow, and each with its own unique ability. Come along, as Jessie discovers all the possibilities of her miraculous slimes. Being a 5th grader gives Jessie a lot of opportunities to try out her new slime powers on her classmates in a positive way. Jessie will be forced to learn her powers quickly, as putting a stop to bullying becomes the least of her worries. For there was a seventh slime that came to life that day. Unlike Jessie's slimes, this one has sinister motives, and Jessie is the only one who can stop it.

What Do White Americans Owe Black People? Oct 24 2020 In this provocative and highly original work, philosophy professor Jason D. Hill explores multiple dimensions of race in America today, but most importantly, a black-white divide which has grown exponentially over the past decade. Central to his thesis, Hill calls on black American leaders (and their white liberal sponsors) to escape from the cycle of blame and finger-pointing, which seeks to identify black failures with white hatred and indifference. This overblown narrative is promulgated by a phalanx of black nihilists who advocate the destruction of America and her institutions in the name of ending "whiteness." Much of the black intelligentsia consists of these false prophets, and it is their poisonous ideology which is taught, uncontradicted, to students of all races. It is they who are responsible for the cultural depression blacks are suffering in today's society. Ultimately, the answer to "what do White Americans owe?" is not about the morality or practicality of reparations, affirmative action,

or other redistributionist schemes. Hill rejects the collectivist premise behind the argument, instead couching notions of culpability, justice, and fairness as responsibilities of individuals, not arbitrary racial or ethnic groupings.

Birds of British Columbia, Volume 4 Aug 14 2022
This much-awaited final volume of *The Birds of British Columbia* completes what some have called one of the most important regional ornithological works in North America. It is the culmination of more than 25 years of effort by the authors who, with the assistance of thousands of dedicated volunteers throughout the province, have created the basic reference work on the avifauna of British Columbia. Volume 4 covers the last half of the passerines and describes 102 species, including the warblers, sparrows, grosbeaks, blackbirds, and finches. The text builds upon the authoritative format of the previous volumes and is supported by hundreds of full-colour

illustrations, including detailed distribution maps, unique habitat shots, and beautiful photographs of the birds, their nests, eggs, and young. In addition, a species update lists and describes 27 species of birds new to the province since the first three volumes were published. The book concludes with Synopsis: The Birds of British Columbia into the 21st Century, which synthesizes data and information from all four volumes and looks at the conservation challenges facing birds in the new millennium. The four volumes in The Birds of British Columbia provide unprecedented coverage of the region's birds, presenting a wealth of information on the ornithological history, regional environment, habitat, breeding habits, migratory movements, seasonality and distribution patterns of 472 species of birds. It is the complete reference work for birdwatchers, ornithologists and naturalists.
